HSF System SK: Quality, Expertise, Reliability

Construction company HSF System SK is one of the 15 largest construction companies in Slovakia.

HSF System SK has been a reliable general building contractor since 2010. It was established as a subsidiary of HSF System, joint stock company, which has operated on the Czech construction market since 2002. In 2020, HSF System SK had, despite the overall economic recession, revenues of 24.6 mil. EUR and a net profit of 1.97 mil. EUR. During its existence, the company has completed contracts totalling 174,834,000 EUR.

The company today uses Building Information Modelling (BIM) throughout the entire project life, from the design through implementation phases. It therefore covers the whole range of areas as well as cooperation with investors or suppliers. In the future, it plans the application of a physical model in the future administration and maintenance of the building as the next step in implementation.

In 2016 and 2017, the company acquired experience in the construction of green buildings in line with the German DGNB (German Green Building Council) certification system. It was the construction of the first such certified building in Slovakia (DS Logistic).

HSF System SK is headquartered in Žilina, with other branches in Bratislava and Prešov.
